Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host diseases, rheumatoid arthritis, psoriasis, inflammatory bowel diseases, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chronic myelogenous leukemia, cancer, liver disease, Hodgkin's chronic myelogenous leukemia, cancer, liver disease, Hodgkin's disease, osteoarthritis, Lyme's disease, cacheria and autoimmune diseases e.g. myasthemia gravis, autoimmune diabetes and systemic disease, osteoarthritis, Lyme's disease, osteoarthritis, Lyme's disease, cacheria and systemic ransgenic animals and the TANGO polypeptides themselves. Partial TANGO-128, 140, 197, 212, 213, 224, 239 sequences are useful in the TANGO parmacogenomics and for monitoring clinical trials. TANGO pharmacogenomics and for monitoring clinical trials. TANGO copypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a continual and the continual and the continual and the continual and contin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          secreted protein; proliferative disorder; cancer; tumour;

AMD05300-AMD05379 represent cDNAs corresponding to 28 human secreted protein genes, and AAE0136-AAE01513 represent the proteins they encode. CC AAE01514-AAE01544 represent human secreted protein fragments or variants. CAE01514-AAE01544 represent human secreted protein fragments or variants. CE AAE01514-AAE01544 represent human secreted protein or or variants. CC The genes and their secreted proteins are useful for preventing, therefore the protein or gene therapy. Pathological conditions can be diagnosed by determining the therapy. Pathological conditions can be diagnosed by determining the experience of amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the mutations in the new genes. Specific uses are described for each of the mutations in the new genes. Specific uses are described for each of the mutations in the new genes. Specific uses are described for each of the proliferative disorders, cancer, rumours, foetal and developmental conflict disorders, diseases of the immune system, abnormalities, haematopoietic disorders, disease, disease, allergies, neurological disorders, rehumatoid arthritis), inflammation, attended disorders, schizophrenia, asthma, conflicted disorders, schizophrenia, asthma, conflicted disorders, pregnancy-related disorders, end infections. The proteins can also be used to aid wound disorders, pregnancy-related disorders, and can be used conflict or apporting partners, and in chemotraxis, and can be used conflict or a protein of the invention conflictioned above, and allergating symptoms associated with the disorders mentioned above, and indiagnostic immunosasays e.g., radioimmunosasay or enzyme linked in immunosubent assay (ELISA). The present sequence represents a human immunosorbent assay (ELISA). The present sequence represents a human immunosorbent assay (ELISA). The present sequence represents an human immunosorbent assay (ELISA).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New nucleic acid molecules encoding 28 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives -
immune system disorder; AIDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy, neurological disorder; Alzheimer's disease; Parkinson's disease; cognitive disorder: schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; pregnancy-related disorder; gastrointestinal disorder; pregnancy-related disorder; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; gene therapy; binding partner identification; chromosome 19.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ij
                                                                                                                                                                                                                                                                                                                                                                          "Mature human secreted protein"

The genes and their secreted proteins are useful for preventing.

The genes and their secreted proteins are useful for preventing.

The genes and their secreted proteins are useful for preventing.

The genes and their secreted protein or gene

therapy. Pathological conditions can be diagnosed by determining the

amount of the new protein in a sample or by determining the presence of

mutations in the new genes. Specific uses are described for each of the

28 genes, based on the tissues in which they are most highly expressed,

and include developing products for the diagnosis or treatment of

proliferative disorders, cancer, tumours, foetal and developmental

abnormalities, haematopoietic disorders, diseases of the immune system,

AIDS, autoimmune diseases (e.g., rheumatid arthritis), inflammation,

allerytes, neurological disorders, (e.g., Alzheimer's disease,

Parkinson's disease), cognitive disorders, schizophrenia, asthma,

allerytes, neurological disorders, eraciopercens, atheroscalers,

cardiovascular disorders, pregnancy-related disorders, endocrine

disorders, and infections. The proteins can also be used to ald wound

the aling and epithelial cell proliferation, to prevent skin aging due to

sunburn, to maintain organs before transplantation, for supporting cell

culture of primary tissues, to regenerate tissues, to identify their

cognate ligands or binding partners, and in chemotaxis, and can be used

as a food additive or preservative to modify storages mentioned above, and

in disorder; supporting or prevent existin in the disorders mentioned above, and

alsorders and in the disorders and in the provent existin in the disorders and in the disorders mentioned as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in in disorder in the disorders mention the disorders and in the disorders and in the disor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host diseases, rheumatoid arthritis, psoriasis, inflammatory bowel diseases, septic shock, ulcerative colitis, Crohn's disease, chronic myelogencus leukemia, cancer, liver disease, Hodgkin's chronic myelogencus leukemia, cancer, liver disease, Hodgkin's chronic myelogencus leukemia, cancer, liver disease, Hodgkin's disease, osteoarthritis, Lyme's disease, cachexia and autoimmune clasease e.g. myasthemia gravis, autoimmune diabetes and systemic lugus erythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial TANGO-128, 140, 197, 212, 213, 224, 239 sequences are useful in forensic biology, for diagnostic assays, prognostic assays, prognostic assays, pharmacogenomics and for monitoring clinical trials. TANGO phyreptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel nucleic acid sequences encoding TANGO-128, 140, 197, 212, 213, 224 and 239 polypeptides useful for the treatment of asthma, rheumatoid arthritis, psoriasis and autoimmune diseases

15-JAN-2001 AAB18447;

AAB18455-57 represent human TANGO 216 proteins. The specification also describes TANGO 261, TANGO 261, TANGO 262, and TANGO 267. The TANGO 260 polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular adhesion, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, pulmonary congestion or cedema, emphysema, chronic bronchitis, bronchial asthma and bronchiactasis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, iatrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's Disease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders note: the present sequence does not appear in the specification; it was created using information provided. Novel human and murine secreted proteins designated TANGO 216, 261, 266, 266 and 267 useful as modulating agents of cellular processes, Disclosure; Page -; 175pp; English. for treating cancer e.g.

AAB18455-57 represent human TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 267. The TANGO 260 closures and the specification and control of the specification and control of the specification. The cellular differentiation and control of modulate cellular adhesion. The cellular differentiation and control of social trafficking and control of migration, modulate cellular differentiation, and land actor-associated and cell trafficking and control of second cellular interactions, and the proliferation of interaction of cells modulate the proliferation, and leukocytes, treat bone marrow, blood cell of that appear in the bone marrow, and leukocytes, treat bone marrow, blood cellular interaction of cellular interactions, interactional disorders, atelectasis, or or ocdema, emphysema, chronic bronchiticis, bronchiticitation, and forming disorders, such diseases, modulate the proliferation differentiation, as ischemic heart disease, modulate the proliferation differentiation, and cerebral ocdema, treat disorders associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to complain beniations, latrogenic disease, cerebral bacterial and viral meningitis, alzheimer's Disease, cerebral cartilage and encephalitis, and treat hepatic disorders.

Cy created using information provided.
oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; iatrogenic disease; inflammation; meningitis; Alzheimer's Disease; cerebral toxoplasmosis; parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 134 ENRQGYRTASVIIALTDGELHEDLFFYSEREANRSRDLGAIVYCVGVKDFNETQLARIAD 193

cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate the proliferation, differentiation, and/or function of cells modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, pulmonary congestion or oedema, emphysemm, chronic bronchills, bronchial sthma and bronchiectasis, intestinal disorders, spleen associated disease, modulate the proliferation, differentiation, as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder, They may also be used to treat disorders associated with the ovaries, and cerebral cedema, hydrocephalus, brain herniations, iatrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's Disease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

The specification also describes TANGO 267, TANGO 267, and TANGO 267. The TANGO CC describes TANGO 267, TANGO 267, and TANGO 267. The TANGO CC describes TANGO 267, TANGO 267, The TANGO CC polypeptides can be used to mediate cellular adhesion. The cellular differentiation and/or migration willebrand factor-associated disorder, requlate extracellular matrix structuring, cellular adhesion, and proliferation, modulate cellular interactions, compulate the proliferation, differentiation, and/or function of cells and hematopolatic associated diseases and disorders, such as cancer, and hematopolatic associated diseases and disorders, atelectasis, combinate the proliferation of mediate the proliferation of mediate diseases, modulate renal disorders, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such asthma and bronchlectasis, intestinal disorders, spleen associated disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to cartilage associated diseases or disorder. They may also be used to treat disorders associated with the ovaries, and cerebral one and/or toxplasmosis, Parkinson's disease, infilammations, toxplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders. They may created using information provided.
                                                                         rango 266; TANGO 216;; TANGO 261; TANGO 262; TANGO 267; cellular proliferation; cellular differentiation; cellular adhesion; von Willebrand factor-associated disorder; cell trafficking; cancer; hematopoletic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain herniation; latrogenic disease; inflammation; meningitis; Alzheimer's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel human and murine secreted proteins designated TANGO 216, 261, 262, 266 and 267 useful as modulating agents of cellular processes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Fraser CC;

                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a murine TANGO 216 polypeptide. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular proliferation, modulate cellular differentiation and/or modulate cellular differentiation and/or modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell traficking and/or migration, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematropotetic associated diseases and disorders, atelectasis, pulmonary congestion or cedema, emphysema, chronic bronchitis, bronchial asthma and bronchiectasis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to treat disorders associated with the covaries, cerebral ocedma, pydrocephalus, brain herniations, latrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's bisease, inflammations, bacterial and viral meningitis, and treat hepatic disease, multiple sclerosis, disorders ascociated with the disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5,

AAB18458-60 represent murine TANGO 216 proteins. The specification also describes TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO cestibles TANGO 266, TANGO 261, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular adhesion. modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, cand hematopoietic associated diseases and disorders, spleen associated asthma and bronchiectasis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such
                                                                                                                                                                                                                                                                                                                                                                                                                                         hematopoietic associated disease; atelectasis; pulmonary congestion; oedema; emphysema; chronic bronchitis; bronchial asthma; bronchiectasis; intestinal disorder; spleen associated disease; renal disorder; cardiovascular disorder; ischemic heart disease; hydrocephalus; brain hernlation; latrogenic disease; inflammation; meningitis; Alzheimer's Disease; cerebral toxoplasmosis; Parkinson's disease; multiple sclerosis; hydrocephalus; encephalitis; hepatic disorder.

in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/hibhin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and thrombolytic activity, cancer diagnosis and thrombolytic activity.
                                                                                                                                                                                                                                                                                     ombolytic activity, cancer diagnosis and therapy, drug screening, for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the printed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δλ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ð
                                                    The invention retailed witch call moretures acroading novel human secreted extracellular matrix proteins (SPS). The polynucleotides and proteins are used to prevent, treat a medical condition in e.g. humans, mice, rabbits, goats, horses, dats, dogs, chickens or sheep. For example, disorders associated with decreased extracssion of SPS. The SP polynucleotide or a vector expressing them may be administered to treat diseases by gene therapy. Antisens enlectules may be administered to treat diseases by gene therapy. The SPS may also be the cells own genes and preventing their expression. The polynucleotides may be administered to down regulate expression. The polynucleotides can also be used as DNA probes in diagnostic assays. The SPS may also be used as antigens to produce antibodies and to identify modulators used as antigens to produce antibodies and to identify modulators as also be used to down regulate expression and activity of SPS and as diagnostic agents for detecting the presence of SPS in samples. The disorders include for example: immune/autoimmune diseases (e.g. HIV (human immunodeficiency virus) infections, anaemia, rheumatoid arthritis and multiple sclerosis), cancers and hyperproliferative disorders (e.g. cardiac Parkinsor's disease), neurological diseases (e.g. Alzheimer's disease, cartest, tachycardia and angina). Infections caused by bacteria, viruses and fungi and ocular disorders (e.g. corneal infections). Other uses tillude wound healing, maintenance of organs before transplantation,

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to the polynucleotide comprises a 3'-end sequence, where the polynucleotide which comprises a 3'-end sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length AAH13613 to AAH13628 and AAH13633 to AAH13624 represent human anino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                              Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               80 MSFIVFSTRGTTLMKLTEDREQIRQGLEELQKVLPGGDTYMHEGFERASEQIYYENRQGY 139
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RTASVIIALTDGELHEDLFFYSEREANRSRDLGAIVYCVGVKDFNETQLARIADSKDHVF 199

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
